DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-16, 18 and 21-36 are rejected under 35 U.S.C. 102(e) as being anticipated by Streibig ('375). Streibig ('375) teaches a method of designing a colored contact lens having a very natural appearance including the steps of recording an image of a cosmetically appealing eye and separating the recorded image into a plurality of component colors and patterns that can be reproduced on a contact lens (col. 3, line 51-col. 4, line 37). The image is an actual eye or a facsimile of an actual eye. The image is created using graphic design means (Adobe software; col. 3, line 66-col. 4, line 37). The step of recording the image can include scanning the image (col. 3, lines 53-57). Automatically storing the image in a computer memory is a result of using the computer and a computer program such as Adobe to process the image (col. 3, line 63-col. 4, line 2). The step of separating the recorded image includes using a computer program to divide each component color or associated pattern from each other component color or associated pattern (col. 4, lines 7-9; col. 5, lines 51-61).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 17, 19 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Streibig ('375). Streibig ('375) is cited for teaching the methods and articles of claims 1-16, 18 and 21-36. Streibig does not teach the specific colors used in producing the lenses. However, using any of the cited colors is inherent in the color of the eye scanned or any software used to produce the composite colors. Therefore, it would have been obvious to one of ordinary skill in the art to use any one of brown, blue, gray, green, cyan, magenta, yellow, black, violet or hazel, since these are components inherently in eye color.
